

Anova

Optimising Middle Office Analytics

Control, order and coherence

Anova

Bringing control, order and coherence to middle office analytics

Anova is an all-encompassing solution that is designed to meet the challenge of today's middle office analytics environment. It enables investment management firms to carry out business functions in a very different way, helping them to realise new levels of efficiency, accuracy and seamless global operations. At the heart of Anova is a global operating platform, enabling investment firms to access a company-wide analytical suite seamlessly and uninterrupted from any location in the world.

Changing the Status Quo

Historically within the middle office, different systems were required in different business areas - for example by asset classes, investment styles and across geographies. As a result, middle office analytic operations are typically fragmented from both analytical application and geographic perspectives. This causes inefficiencies, multiple points of potential failure and increased ownership costs.

Anova is designed to address this proliferation challenge and related cost, data management and operational risk issues. It provides a platform that supports uninterrupted global operations whilst providing the ability to access multiple analytical applications seamlessly using a single set of aggregated data.

Anova helps you achieve your operational objectives

Anova can bring cost savings to your IT function by simplifying operations through a centralised platform, thereby eliminating duplication. This also helps minimise points of potential failure between applications and regional hubs.

Anova also supports integration with all analytic applications. Leverage your current investment in analytics applications by including them in the Anova ecosystem and unlock additional benefits.

Anova gives you:

■ Global Operating Platform -

the ability to access the firm-wide analytical suite seamlessly from any location across the world. It provides 24x7 continuous operation, essential for the ability to run an effective and cost efficient global analytics function and to facilitate offshoring. For example, if one region is 'closed' to calculate NAV, other regions can continue to perform these calculations.

■ Alignment of needs with solutions -

assembling functional components to meet the varying needs of the specific desk or activity. It recognises that different combinations of analytics are used by asset class, styles and risk/return profiles.

■ Data consolidation -

aggregating the mass of analytical information generated across the plethora of applications and multiplicity of venues; reducing operational risk by decreasing unnecessary movement of data between systems and regional hubs.

■ Role-based Dashboards -

user definable dashboards that combine the analysis most suited to individual needs - from Portfolio Managers to 'C-level'.

■ Resilient scalability -

proven ability to support scale operations based on the track record of our suite of investment management solutions.

This illustration represents the ‘ideal state’ of the middle office analytics function – where efficiency, accuracy and flexibility define its operational ideal.

Tailored to your requirements

Anova enables users to select the middle office analytics components of their choice. Components can be selected by choosing individual products from the Anova suite. This innovative approach to developing and promoting business applications within the investment management sector allows firms to blend applications and components. In this way it provides the most comprehensive and bespoke platform possible – the mix containing the optimum of new and existing applications – all operating within the Anova ecosystem.

Anova – functional coverage

Anova is designed to be a self-service application, where end users are never more than a few simple clicks from the service or information they require. It embraces all the areas of middle office analytics:

- Performance Measurement
- Equity Analytics
- Fixed Income Analytics
- Risk Management
- Composites Production
- Post Trade & Regulatory Compliance

With Anova you select the precise functional components required to fulfill your middle office analytic functions.

	Anova Aggregator	Anova Performance	Anova Composites	Anova FI Attribution	Anova Equity Attribution	Anova Risk	Anova Compliance

Anova Aggregator

Consolidation, Aggregation and Visualisation

Anova Aggregator consolidates, manages, enriches and presents all analytical and related data from each manufacturing solution, including data generated by the Anova suite of products. Anova Aggregator is system agnostic and thrives in the complex investment management landscape, strengthening the decision making process, bringing clarity and enhancing the client experience.

Analytical information is manufactured throughout your organisation and encompasses many disciplines and functions including risk management, performance measurement, attribution, positions and risk exposures, compliance, finance and market data.

The Anova Aggregator is central in facilitating the Anova 'Role-based Dashboard' visualisation capability.

Role-based Dashboards

Visualisation, distribution and clarity

Anova's powerful and contemporary user interface offers the ability to create and then select 'Role-based Dashboards' to help manage the assets more effectively, harnessing the analysis from multiple sources and systems.

Through 'Role-based Dashboards', Anova enables all analytics to be made available to every potential internal consumer, be they the 'C Level', fund managers, client facing teams or any individual with access to the Anova ecosystem – either internal to your organisation or approved counter-parties.

The Anova experience

Anova is designed to help you make informed decisions more accurately, and with greater confidence and speed, by providing you and your colleagues with access to all the analytical information your organisation holds.

View and interact with information in the way that works best for you.
